

Role of the Office:

The **ICTR Biostatistics Program** is an integral part of the **Johns Hopkins Biostatistics Center**, the applied arm of the world-renowned Department of Biostatistics. JHBC provides comprehensive biostatistics and data science expertise in support of research, education, and service.

Biostatistics consultations

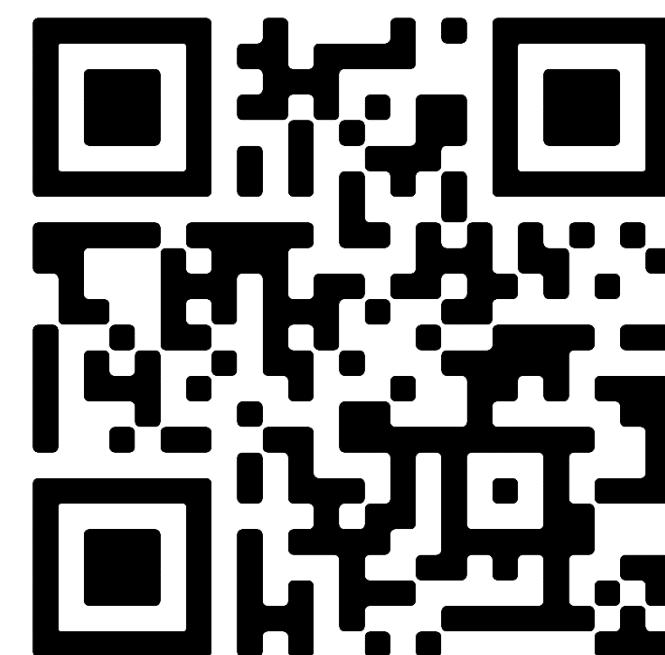

- Study design and protocol development
- Statistical analysis and interpretation
- Manuscript and report preparation
- Independent statistical reviews
- Development of fully automated and reproducible reports
- Advanced computing and innovative methods

Data management consultations

- Reviews of database design and data collection instruments
- Programming and development of analyzable datasets
- Development of custom data collection systems
- Administration and support of REDCap

ICTR Biostatistics Program and Johns Hopkins Biostatistics Center (JHBC)

Scan to Learn More

- ***Continuity of service through data management and analysis***
- ***Access to world-class biostatistics faculty and cutting-edge methods***
- ***Experience in successfully analyzing EPIC and “big” data***
- ***Reproducibility through auditable workflow programming***

Services Provided:

JHBC ICTR free services

- In-person 30-minute walk-in consultations for short questions (three times a week at SPH)
- Extended biostatistical and/or data management consultations (up to 5 free hours)

Additional free services

- Letters of support for grant applications
- Independent manuscript review for journal submissions

Academic enrichment services

- Professional development and sharing of best practices for biostatisticians and data managers
- Educational opportunities for clinical and translational communities

We also provide fee-for-service consultations and level of effort support on grants
